

What is Web check-in?

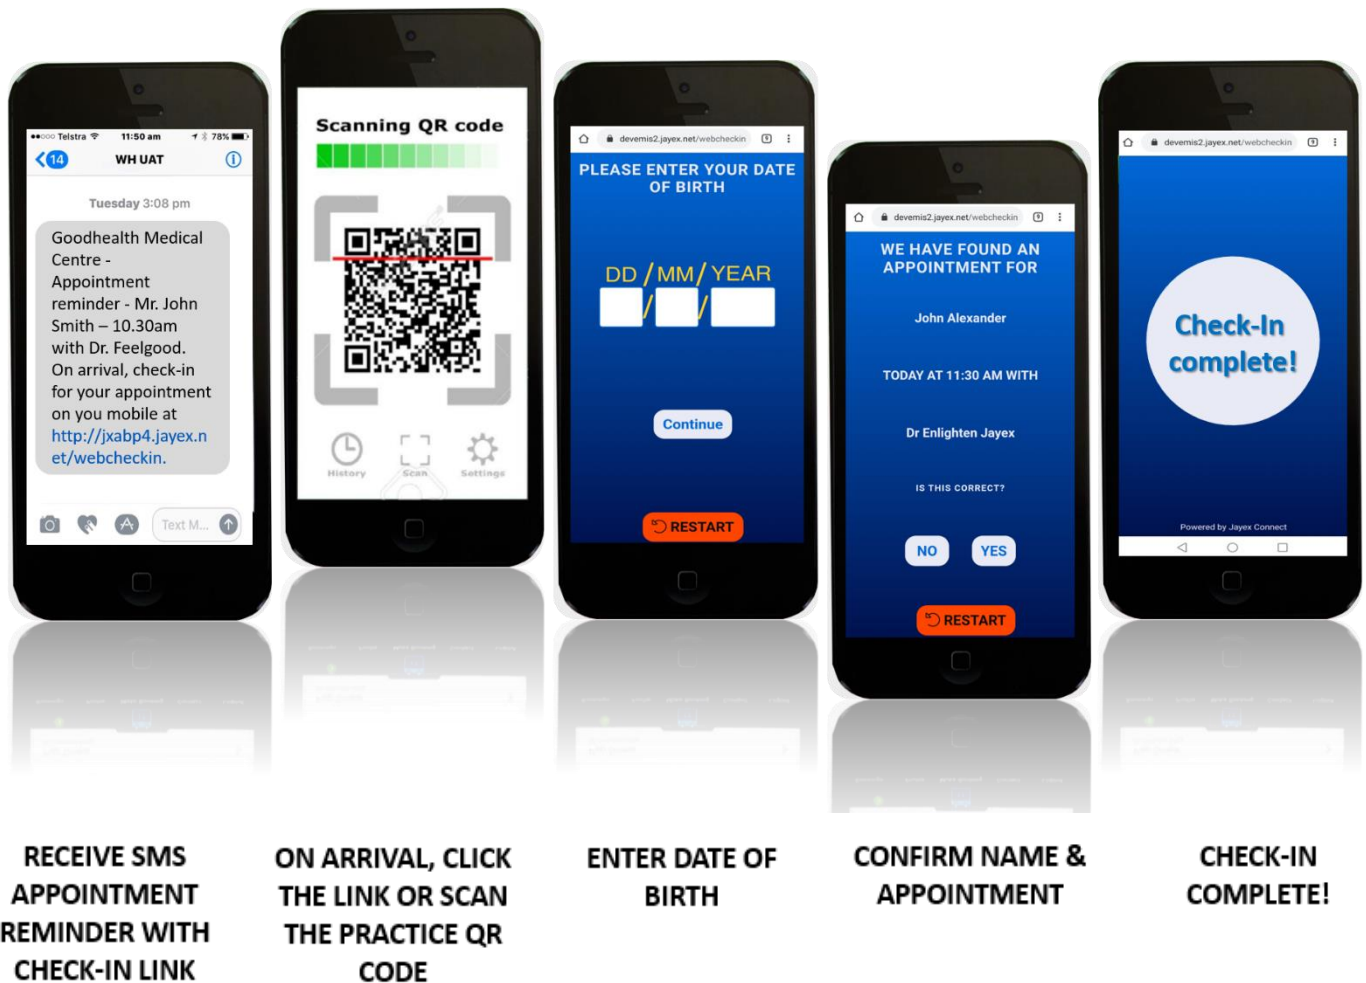

Mobile self-check-in is a new module of the Jayex Connect platform that enables easy and efficient patient check-in and helps with queue reduction in busy waiting rooms. This easy check in process works with EMIS, SystemOne and Vision.

Key Features

-  Reduce queues in waiting rooms
-  Simple, two-step patient check-in
-  Improves patient experience
-  Streamlines the check-in process
-  Eases the workload of reception staff

The Web check-in process

If your practice sends an automated SMS appointment reminder to patients you can include a "check-in" link. On arrival at the clinic, the patient can open this link or alternatively, they can scan the unique practice QR code you display in the waiting room to access the check-in module on their mobile phone. Patients can only check in if they are within a 20-metre radius of the practice.

Setting up the mobile check in module can be done remotely and is not only available for Jayex customers but also to practices using Egton and Wiggly/Engage check in screens.

For more information on how mobile check-in can benefit your practice and set up costs please e-mail sales@jayex.com or call **0208 838 6222**.
